

Viton® fluoroelastomer

From DuPont Performance Elastomers

Viton® A-401C

Introduction

Viton® A-401C* fluoroelastomer is an incorporated cure “A-family” dipolymer designed for compression molding of sealing devices that must meet major fluoroelastomer specifications. In addition to the heat and chemical resistance characteristics typical of Viton® fluoroelastomers, Viton® A-401C offers significant improvements in processing and rheology. Viton® A-401C can be blended with similar Viton® types to provide variations in processing, properties, and shrinkage.

Compared with Viton® E-60C, Viton® A-401C features:

- Fully precompounded
 - O-ring curative level
- Improved compression molding
 - increased mold flow
 - easier mold release
 - less mold fouling
- Improved extrusion
- Increased cure rate
- Improved compression set resistance
- Same mold shrinkage as Viton® E-60C

Applications

Viton® A-401C is highly recommended for O-rings, extruded cord, gaskets, seals, and profiles. Viton® A-401C can be formulated to meet fluoroelastomer specifications Mil-R-83248B, AMS 7276D, and AMS 7259A.

Use of Viton® A-401C

Table 1 compares compounds of Viton® A-401C, Viton® A, Viton® E-60C, and Viton® A-201C. *Table 2* compares the effects of carbon black levels in Viton® A-401C, and *Table 3* compares the use of mineral fillers in Viton® A-401C. *Table 4* lists the performance of Viton® A-401C to fluoroelastomer specifications AMS 7276D and Mil-R-83248B (Amendment I).

Product Description

Chemical Composition	Dipolymer of hexa-fluoropropylene and vinylidene fluoride, plus cure chemicals
Physical Form	Slab
Color	Off-white
Odor	None
Specific Gravity	1.82
Solubility	Low molecular weight esters and ketones
Storage Stability	Excellent
Mooney Viscosity (ML 1 + 10 at 121°C [250°F])	42

Safety and Handling

Before handling or processing Viton® A-401C, read and be guided by the recommendations in the DuPont Performance Elastomers technical bulletin “Handling Precautions for Viton® and Related Chemicals.”

Viton® A-401C should be handled like other Viton® fluoroelastomers. Keep off skin and wash well after handling. For the safe handling of other compounding ingredients, refer to the respective manufacturers’ literature.

*Viton® A-401C was formerly VTR-6600.

Test Procedures

Property Measured	Test Procedure
Compression Set	ASTM D395, Method B (25% deflection)
Compression Set, O-Rings	ASTM D1414
Hardness	ASTM D2240, durometer A
Mooney Scorch	ASTM D1646, using small rotor. Minimum viscosity and time to a 1-, 2-, 5-, and 10-unit rise are reported.
Mooney Viscosity	ASTM D1646, ten pass, 121°C [250°F]
ODR (vulcanization characteristics measured with an oscillating disk cure meter)	ASTM D2084
Property Change After Oven Heat-Aging	ASTM D573
Stress/Strain Properties	
100% Modulus	ASTM D412, pulled at 8.5 mm/sec (20 in/min)
Tensile Strength	
Elongation at Break	
Volume Change in Fluids	ASTM D471
Temperature Retraction	ASTM D1329

Note: Test temperature is 24°C [75°F], except where specified otherwise.

Proprietary Materials

Sources of compounding ingredients used in developing the information in this bulletin are listed below. This is not to imply that comparable ingredients from other sources might not be equally usable.

Material	Composition	Supplier
Albaglos®	Calcium Carbonate (precipitated)	Pfizer, Inc. M.P.M. Division New York, NY 10017
Blanc Fixe	Barium Sulfate (precipitated)	Whittaker, Clark & Daniels (Distributor) South Plainfield, NJ 07080
Celite® 350	Diatomaceous Silica	Manville Corp. & Subsidiaries Denver, CO 80217
Nyad® 400	Calcium Metasilicate	Interpace Corporation Parsippany, NJ 07054
Ti-Pure® R960	Rutile Titanium Oxide	DuPont Company Wilmington, DE 19898

The information set forth herein is furnished free of charge and is based on technical data that DuPont Performance Elastomers believes to be reliable. It is intended for use by persons having technical skill, at their own discretion and risk. Handling precaution information is given with the understanding that those using it will satisfy themselves that their particular conditions of use present no health or safety hazards. Since conditions of product use and disposal are outside our control, we make no warranties, express or implied, and assume no liability in connection with any use of this information. As with any material, evaluation of any compound under end-use conditions prior to specification is essential. Nothing herein is to be taken as a license to operate under or a recommendation to infringe on any patents. While the information presented here is accurate at the time of publication, specifications can change. Please check www.dupontelastomers.com for the most up-to-date information.

CAUTION: Do not use in medical applications involving permanent implantation in the human body. For other medical applications, discuss with your DuPont Performance Elastomers Customer Service Representative, and read Medical Caution Statement H-69237.
